

To, Fr Mark, - both Councils & to the wider parish.

I'm sorry to say but there is a small rumour out there that a decision may have been made, - I hope its not like TCC. secret meetings behind closed doors, - With high rents, - mortgages, - & the fast pace of family life only a percentage will find time for the computer & submissions, - Just put all submissions in our weekly news letter, - it may create more involment & more will know what's going on about a big decision, - Because, - we don't want another architect's mess like we have now, - A perfect sloping site & they put the Altar at the bottom after they put a few truck-loads of clay in, & then cleverly sloped the front half of the seats, (10 out of 10) & then leveled the back half so almost no body can see the altar or Priest, - I am a little surprised why Thorn architect's was called in so early, - Just hope they are Catholic's & don't want to be paid, - other wise no thank you, - Even Monsignor Trevor Murray found holes in their mess, - Now to mention, (no.1.) Fr Mark, - & some very sound thinking people out there, - Hilton, - tell us your parking idea please, - All others excellent reading, - With so much written & talked about the church not being big enough, - Tony Fuller did mention to build upwards, - (good thought Tony) which has been my thinking for many years now, - So with the parking problem solved, - or partly at least, - Just re nail the roof plus a sealant, - (you call it maintenance) You then have a building with a floor, - walls, - & a roof, - You can then at least double the seating, - Mum-Dad & the kids would love it, - There may be only 2 or 4 support pillars to obstruct vision to the Altar, - but the above tying in would support & strengthen the existing steel trusses, - & a letter from the Pope to EQC saying that all good Catholics would be saved or become a saint would be ample, - (I am not up with EQC & fire red tape rules, You may need several more truck-loads. of clay for the Altar, -

2.

Use the choir door as a entrance or for the
oldys who might struggle with the hill, - 1990 is
not an old building, - may be for the one's that
up date their car, house, - kitchen, - & bathroom
often, - There are Architects leaky messes
all around the country with houses, schools & churches,
We must all be thought full through this time, -
I was born here in the 1900 ("something") as a
farmer & still am today, - being in the Mount, -
Tauranga, - Te-Puke, - Kati-kati, & Tauranga again
parishes

May God Bless all those good thinking
& help-full people out there.
